

NATURALLY POWERED

Repower Your Trucks and Your Budget

Turn Your Trucks Into Clean Burning,
Money Saving Vehicles With **Repowered NGV**

RePOWERED NGV
NATURAL GAS VEHICLE CONVERSIONS

Advanced Engine Technology & Pre-Engineered Vehicle Designs

Engine & Vehicle Validation with Four Season Testing

From the painful price of diesel fuel eating away at your budget to the ever-stringent emission standards, the trucking industry is constantly facing an uphill battle. We can help turn things around with a cost-effective, environmentally friendly solution.

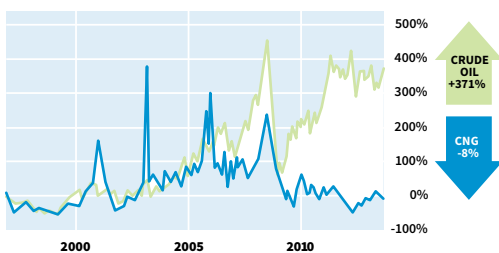

We are a full-fledged remanufacturing company that converts medium duty straight trucks, city tractors and school bus fleets to run on natural gas. Our service can help companies with centrally located vehicles reap the benefits of natural gas, while also improving their “green” image. By repowering your existing vehicles with our remanufactured program, you can take advantage of:

- The low cost of natural gas
- Significantly reduced overall vehicle operating costs
- Lower capital investment compared to buying a new natural gas powered truck

Power Up Naturally

Natural gas costs up to 50% less than oil and it’s a clean, U.S. produced fuel alternative that delivers a lot of energy with lower hydrocarbon (or greenhouse gas) emissions. Plus, because there is an abundance of natural gas in the U.S., the price will continue to remain stable, whereas oil is subject to global fluctuations and increases.

PRICE CHANGES PAST 20 YEARS: CNG & CRUDE OIL
 ■ Brent Crude Oil Spot Price % Change ■ Henry Hub Natural Gas Spot Price % Change

With our simple natural gas conversion process, you can reap big savings along with getting your ROI back quickly.

\$10,000 a year in fuel costs gets you...

Our Program

We are the only company that can provide an OEM style, fully validated, EPA emission compliant, remanufactured engine program that runs on dedicated natural gas, without compromising engine performance. Our natural gas repower program uses the high volume Navistar DT466 engine. Our engines are remanufactured to exacting standards and factory tested by Springfield Remanufacturing Corp (SRC), a leading, independent and experienced supplier of remanufactured engines and components to major automotive manufacturers and suppliers. SRC is an employee owned company based in Springfield, MO.

- Spark ignited, central port injection dedicated, lean burn CNG engine
- Quality, factory-tested remanufactured engine
- Endured stringent dynamometer testing at McLaren Performance Technologies
- Proven with customer field fleet testing
- Tested in extremes of hot and cold, high and low altitude and high and low humidity environments
- EPA emissions compliant
- Nationwide repower installer and service support network
- Range of HP and torque ratings

- Available CNG tank sizes to meet most fleets daily range requirements
- 1-year or 50,000 mile warranty

Our engine validation program includes testing that normal major OEMs perform, providing users with “good-as-new” engines and improved up-time, all while significantly extending fleet vehicle life and deferring capital expenditures.

Get Started Today

Our commitment is to provide you a painless, and more profitable, way to switch your fleets from diesel to natural gas. We work with reliable, proven companies that can offer you a complete range of services including:

- Financing and leasing options
- Fueling station installation or mobile fueling
- Natural gas fuel contracts
- CNG engine and vehicle servicing

Contact us today to see how a natural switch can bring new life to your trucks and your budget.

NATURALLY POWERED

NORTH AMERICAN REPOWER

The critical natural gas fueling systems used in all Repowered NGV vehicles are developed by North American Repower, a privately held clean-tech company that specializes in natural gas engine fueling systems and conversions. North American Repower is managed by a select group of forward thinking investors who are concerned about the future and believe efficient and intelligent use of our existing resources is the most immediate effective path to preserving the environment and revitalizing our economy. North American Repower uses a customer-centric approach to create intelligent, efficient total vehicle design solutions and on-going relationships to meet customers' needs in the natural gas marketplace.
